

Post: Junior Programmer

1. Create an application to save data of the insurance agents and customers of ABC Company using the following database tables:-

Table 1 - Agent_Master

Field Name	Data Type	Remark
Agent_No	Int	Primary Key
Agent_Name	Varchar	

Table 2 – Policy_Details

Field Name	Data Type	Remark
Policy_No	Int	Primary Key (AutoNumber)
Agent_No	Int	Foreign Key
PolicyDate	Date	
CustomerName	Varchar	
PolicyAmount	Int	
Commission	Decimal	To be calculated Automatically

2. Make at least 5 manual entries in Master table Agent_Master.
3. Create a GUI to save data in Policy_Details table as per the conditions mentioned below:-

Policy Amount Commission to Agent

<1000 2%

>1000 2.5%

Use dropdownlist to display Agents.

4. Display report as below:-

Agent	PolicyDate	PolicyAmount	Commission
-------	------------	--------------	------------

Post: Junior Programmer**Table 1 - Mst_Model**

Field Name	Data Type	Remark
Model_ID	Int	Primary Key
Model_Name	Varchar	
Service Charge	Int	

Table 2 – Service_Tbl

Field Name	Data Type	Remark
TransID	Int	Primary Key
ModelID	Int	Foreign Key
Vehicle No.	Varchar	
Current Km Reading	Int	
Service Date	Date	
Service Charge	Int	AutoCalculate from Mst_Model

- 1) Create a GUI to save the record in Service_Tbl.
- 2) Use Combo Box/ Dropdown list
- 3) On selection of date from Calendar
- 4) Generate Report:

Sr.No	Model Name	Vehicle No	Service Charge
-------	------------	------------	----------------

Post : Junior Programmer**Table 1 - Mst Table**

Field Name	Data Type	Remark
CatId	Int	PK/AutoNumber
CatType	Varchar	
Job Limit	Int	
Job Fee	Int	
Late Fee	Int	

Table 2 - Job Table

Field Name	Data Type	Remark
JobId	Int	PK/AutoNumber
CatId	Int	FK
Candidate Name	Varchar	
District	Varchar	
Late fees	Varchar	(Yes/No)
Total fees	Varchar	AutoCalculate

- 1) Use CatType in DropDownList.
- 2) Any person can't get twice job (Job limit)
- 3) More than 5 person cannot apply from the same district.
- 4) Total person can't apply more than according to their category job limit.

Post : Junior Programmer

Table 1 - Mst Table

Field Name	Data Type	Remark
SubjectId	Int	Primary Key
SubjectName	Varchar	(Math, English)

Table 2 - Transaction

Field Name	Data Type	Remark
ApplicationId	Int	Primary Key/ AutoNumber
SubjectId	Int	
Applicant Name	Varchar	
Gender	Char	
Date	DateTime	
Gratuation Marks	Decimal	

- 1) 5 manual entries in Mst Table.
- 2) Subject Name is in dropdown.
- 3) <55% for math and <60% for English.
- 4) Generate Report :-

SubjectName – DropDownList

Sr.No	Applicant Name	Gratuation Marks
-------	----------------	------------------

Post: Junior Programmer**Table 1 :Subject_Master**

S#	Field Name	Data Type	Remarks
1.	Subject_Code	Integer	Primary Key(AutoNumber)
2.	Subject_Name	Varchar	Not Null

Table 2 :Tbl_Candidate

S#	Field Name	Data Type	Remarks
1.	Roll_No	Integer	Primary Key (AutoNumber)
2.	Student_Name	Varchar	
3.	Subject_Code	Integer	Foreign Key
4.	Marks_in_Test1	Integer	
5.	Marks_in_Test2	Integer	
6.	Result(Pass/Fail)	Varchar	Automatic

Conditions:

1. Create GUI to save data in Tbl_Candidate.
2. Make atleast 5 Manual Entries in Subject_Master.
3. Max Marks for both Subjects is 50.
4. Passing Marks Min 50% in Individual Test.
5. If Student Pass in both Subjects then Student is Pass otherwise Fail

Report 1

1. Drop-down: Pass/Fail
2. Display below Columns

Roll_No	Student_Name	Marks_in_Test1	Marks_in_Test2	Result (Pass/Fail)
---------	--------------	----------------	----------------	--------------------

Report 2

1. Subject wise No of Passed Students
2. Display below Columns

Subject_Name	No. of Students
--------------	-----------------

Post: Junior Programmer**Table 1 - Employee Pay**

Field Name	Data Type	Remark
ECode	Int	Primary Key
ENAME	Varchar	
DOJ	Date	
BPay	Int	
DP	Int	
DA	Int	
DeptCode	Int	Foreign Key

Table 2 - Dept Tbl

Field Name	Data Type	Remark
DeptCode	Int	Primary Key
DeptName	Varchar	

Business Rules:

- 1) DP should be 50% of Basic Pay.
- 2) DA should be 12.5% of Basic Pay but if the employee has not completed one year of service than DA = 0.
- 3) Make an interface to save the data in the table Employee Pay based on the Business Rules.
- 4) Generate Report:

EmpCode	EmpName	DeptName	DOJ	Basic Pay	DP	DA	Total (BP+DP+DA)
---------	---------	----------	-----	-----------	----	----	---------------------

Post: Junior Programmer

1. 'ABC' Paper Supplier paper of the different types to Customers and wishes to create an application to save the details of the paper sold to customers using the following database :-

Table 1 - MstPaperType

Field Name	Data Type	Remark
PaperTypeCode	Int	PK (AutoNumber)
PaperTypeName	Varchar	Not Null
PriceofReam	Int	Not Null

Table 2 – Transaction Table

Field Name	Data Type	Remark
SalesID	Int	PK (AutoNumber)
PaperTypeCode	Int	FK
SupplyDate	Date	Date
CustomerName	Varchar	Not Null
QtyRequired(in ream)	Int	Not Null
QtyIssued (in ream)	Decimal	Not Null
Total Cost	Decimal	Auto Calculate

2. Make at least 3 manual entries (A4,A5,Legal) in MstPaperType Master Table.
3. Design GUI to save data in table TransactionTable using the following criteria:-
 - The paper type should be shown using dropdownlist.
 - Not more than 10 reams should be issued to each customer.
4. Design following Report:-

S#	PaperTypeName	SupplyDate	CustomerName	TotalCost
----	---------------	------------	--------------	-----------

Post: Junior Programmer**Table 1 - Item_Master**

Field Name	Data Type	Remark
Item_Code	Int	PK (AutoNumber)
Item_Name	Varchar	
Unit_Price	Decimal	

Table 2 - Order_Details

Field Name	Data Type	Remark
Order_No	Int	PK (AutoNumber)
Order_Date	Date	
Item_Code	Int	FK
Qty	Int	
Unit_Price	Decimal	
Total_Amount	Decimal	
Discount	Decimal	
Bill_Amount	Decimal	

Design a form to store data into the 'Order_dtls' table.

Instructions:

- Make manual entry for at least 5 items into the item_master table.
- Use Calendar for selecting dates.
- Use appropriate validations where ever applicable.
- Discount is 10% on the total Amt.

Design the Following two reports using either data grid or any other reporting tool:

1) Display following report for selected Order date

Select Date:- XXXXXXXX

Sr#	OrderNo	Orderdate	ItemName	Quantity Ordered	Total Amt	Discount	Bill Amt
-----	---------	-----------	----------	------------------	-----------	----------	----------

2) Display a report for all the items Ordered

Month	Item Name	Total Units Sold
-------	-----------	------------------

Post: Junior Programmer

1. Create an application to save data of books and authors of XYZ Library using the following tables:-

Table 1 - Author_Master

Field Name	Data Type	Remark
Author_ID	Int	Primary Key
Author_Name	Varchar	

Table 2 - Dept Tbl

Field Name	Data Type	Remark
Book_ID	Int	Primary Key
Author_ID	Int	Foreign Key
Book_Title	Varchar	
Publication_Date	Date	
Price	Decimal	
Royalty	Decimal	

2. Make at least 5 manual enteries in the tables.
3. Create a GUI to save data in Book_Details table as per the conditions if price less than or equal to 500 royalty 10% and if more than 500 then 15% royalty.
4. Display report as below:-

Author_ID	Book_ID	Author_Name	Book_Title	Royalty	Price
-----------	---------	-------------	------------	---------	-------

Post: Junior Programmer

1. Create an application of Library Management System.

Table 1 - MstTable

Field Name	Data Type	Remark
BookId	Int	PrimaryKey
BookType	Varchar	(Computer,Management)
BookPrice	Int	(100,200)
BookStock	Int	(150,180)

Table 2 - SalesTbl

Field Name	Data Type	Remark
SalesId	Int	PrimaryKey(AutoNumber)
BookId	Int	ForeignKey
PersonName	Varchar	
BookQuantity	Int	
Discount	Int	
Amount	Int	

2. BookType is in DropDownList.
3. Any person can buy maximum 10 books.
4. If BillAmount more than 500 and Computer Book Quantity more than 5 or Management Book Quantity more than 4 then Discount will be 20%.

Generate Report:

#	Book_ID	PersonName	BookQuantity	Amount
---	---------	------------	--------------	--------

Post: Junior Programmer

Design the following Database:-

Table 1 - Mst_Account

Field Name	Data Type	Remark
Acc_No	Integer	Primary Key
Name	Varchar	
Opening_Balance	Decimal	

Table 2 - Transaction_dtls

Field Name	Data Type	Remark
Acc_No	Integer	Foreign Key
Opening_Balance	Decimal	
TransactionType		Credit/Debit
Amount	Decimal	
Closing_Balance	Decimal	

Instructions:-

1. Make at least 5 entries in the Mst_Account table directly.
2. On selecting the acc_no from the 'AccountNo' dropdownlist the corresponding values the name and values must be filled in the 'Name' and 'Balance' textbox.
4. On clicking the Report1 button following report should be displayed in the
 - For all the account Holders.

Account No	Name	Total Amt Debit	Total Amt Credit	Closing Balance
------------	------	-----------------	------------------	-----------------

5. On clicking the 'Report2' button, display all the transactions made by account holder whose account no is selected in the 'Account no' combo box in the following format using the 'Repeater Control'.

Account No	Name	Credit/Debit	Opening Balance	Amount	Closing Balance
------------	------	--------------	-----------------	--------	-----------------

Post: Junior Programmer

1. An ABC firm provides three types of computer professions (Programmer, Junior Programmer & DEO) to other State Govt. Depts. and UTs. For providing the services, the firm collects charges including tax, Design an application to save the details pertaining to the same using following database tables.

Table 1 :MstProfessionalType

S#	Field Name	Data Type	Remark
1	ProfessionalTypeID	Int	PK
2	ProfessionalTypeName	Varchar	NotNull
3	OneTimeCharges	Decimal	NotNull

Table 2 :TblDeployment

S#	Field Name	Data Type	Remark
1	TransID	Int	PK
2	ProfessionalTypeID	Int	NotNull
3	DepartmentName	Varchar	NotNull
4	No. of Professionals	Int	NotNull
5	One Time Charges	Decimal	Autocalculate
6	Tax	Decimal	Autocalculate
7	Charges	Decimal	Autocalculate

2. Make at least 3 manual entries in the MstProfessionalType.
3. Design GUI to save data in table tbldeployment. Use combo box for selecting ProfessionalTypeName from master table.
4. Design the following Report:-

SrNo	Professional Type Name	Total Professionals Deployed	Total Charges Collected
------	---------------------------	---------------------------------	----------------------------

Post: Junior Programmer**Table 1 : Credit Master**

Field Name	Data Type	Remark
CreditCard_ID	Int	Primary Key
Name	Varchar	
Amount	Decimal	

Table 2 : Customer Master

Field Name	Data Type	Remark
Customer_ID	Int	Primary Key
CreditCard_ID	Int	Foreign Key
Transaction	Varchar	Shopping/Withdrawal
Date_of_Transaction	Date	
Service_Tax	Int	
Total_Amt	Int	

- 1) Make 6 manual entries in Credit Master Table & in Customer Master Table through GUI. (If choose Shopping the service tax is 10.3% and if choose withdrawal then there is no service tax.
- 2) Generate Report 1 :

Customer Card No. XXXXXXXX			
Name	Date	Transaction Type	Total Amt (after Service tax)

- 3) Report 2: Display Transaction between 2 dates

Name	No. of Transaction	Total Amount
------	--------------------	--------------

Post: Junior Programmer**Table 1 - Item_Master**

Field Name	Data Type	Remark
Item_Code	Int	Primary Key
Item_Name	Varchar	
Unit_Price	Decimal	

Table 2- Order_Dtls

Field Name	Data Type	Remark
Order_No	Int	AutoNumber
Order_Date	Date	
Item_Code	Int	Foreign Key
Qty	Int	
Unit_Price	Decimal	
Total_Amount	Decimal	
Discount	Decimal	
Bill_Amount	Decimal	

Design a Form to store data into the 'Order_Dtls' table.

Instructions:-

- Make manual entry for at least 3 items into the item master table.
- Use Calendar for selecting dates.
- Use appropriate Validations where ever applicable.
- Discount is 10% on the total amount if >2000, Else 5.5 % on the total amount.

Design the Following two reports using either data grid or any other reporting tool.

1. Display following report for selected Order Date

Select Date: XXXXXXXXXX

Sr.No	OrderNo	OrderDate	ItemName	Quantity Ordered	Total Amount	Discount	Bill Amount
-------	---------	-----------	----------	------------------	--------------	----------	-------------

2. Display a report for all the items Ordered

Month	Item Name	Total Units Sold
-------	-----------	------------------

Post: Junior Programmer**Table 1 - MstTicketRate**

Field Name	Data Type	Remark
Ticket_Id	Int	Primary Key
Ticket_Type	Varchar	Not Null (Amusement Park, Water Park, Combined)
Ticket_Rate	Int	Not Null(Rs 500, 700, 1000)

Table 2- TblTransDetail

Field Name	Data Type	Remark
Trans_Id	Int	Primary Key (Auto)
Ticket_Id	Int	Foreign Key
CustomerName	Varchar	Not Null
Date	Date	Not Null
NoOfTickets	Int	Not Null
Amount	Int	AutoCalculated
Discount	Float	AutoCalculated
PayableAmount	Float	AutoCalculated

- Make 3 manual entries in MstTicketRate Master Table.
- Design GUI to save data in table tblTransDetail using the following.
 - a) The Ticket_Type should be shown using dropdownlist.
 - b) If no. of Tickets required is more than 5 then give discount on the PayableAmount.

Design the following report.

Sr.No	Date	TicketType	TotalDiscount	TotalAmountCollected

Post: Junior Programmer

Table 1 - State_Mst

Field Name	Data Type	Remark
StateId	Int	Primary Key
StateName	Varchar	

Table 2- License_Dtls

Field Name	Data Type	Remark
License_No	Varchar*	Primary Key
Name	Varchar	
FatherName	Varchar	
DOB	Date	
StateID	Int	Foreign Key
VehicleType	Varchar**	
DateOfIssue	Date	
DateOfExpiry	DateTime	

1. Make an interface to save the data in table License_Dtls.
2. Incorporate proper checks and validations.
3. **VehicleType field can take any of the values Car or Scooter
4. Eligibility Age for License is 18 Years.
5. License is valid for 10 years from date of issue.
6. Make reports in the following format.

- Report1

LicenseNo	Name	DOB	StateName	DateofIssue	DateofExpiry
-----------	------	-----	-----------	-------------	--------------

- Report2

StateName	Total no of License Issued
-----------	----------------------------

Post: Junior Programmer**Table 1 - StockTable**

Field Name	Data Type	Remark
ItemId	Int	Primary Key
ItemName	Varchar	Apple,Grapes,Orange
StockLimit (in K.G.)	Int	10,8,12
ItemRate (in Rs.)	Int	80,120,60)

Table 2- StateTable

Field Name	Data Type	Remark
StateId	Int	Primary Key
ItemId	Int	Foreign Key
CustomerName	Varchar	Not Null
Quantity	Int	Not Null
Bill	Int	Auto Calculated

Conditions:-

1. Use ItemName in DropDownList on place of ItemId.
2. Take care about StockLimit.

Report :-

Make Report on selection of ItemName.

ItemName	TotalStock	SaleStock	TotalBill
----------	------------	-----------	-----------

Post: Programmer

1. A toll plaza collects toll tax on travelling types (Single Fair, Up-Down) and type of vehicle (3 wheeler, LMV, HMV) and intends to create an application for the same using the following tables.

Table 1 - MstTollAmount

Field Name	Data Type	Remark
VehicleTypeId	Int	PK
VehicleType	Varchar	(3-Wheeler, LMV,HMV)
SingleFair	Int	(50,100,200)
UpDown	Int	(75,150,300)

Table 2- TblTollTaxDetails

Field Name	Data Type	Remark
TollTaxId	Int	PK
VehicleTypeId	Int	FK
VehicleNumber	Varchar	NotNull
DateOfTravelling	Date	Not Null
TravellingType	Varchar	(SingleFair/UpDown)
GovtVehicle	Varchar	(Yes/No)
TaxPayble	Double	AutoCalculated

2. Make 3 manual entries in MstTollAmount as given above.
3. Design GUI to save data in table tblTollTaxDetails using the following criteria.
- If Travelling Type is UpDown then No charges will be applicable on second Travel on the same Date.
 - Same VehicleNumber cannot be used for more than one VehicleType.
 - No Toll Tax will be applicable on Govt Vehicle.
 - Show TaxPayble on GUI before saving.
4. Show following data in given format. (by Travelling Date)

Sr.No	VehicleType	Travevelling Type	Date of Travelling	Total Tax Collected.
-------	-------------	-------------------	--------------------	----------------------

Grouping should be made on VehicleType, TravellingType, Date of Travelling for Report.

Post: Sr.Programmer/Programmer

A Telecom company intends to create an application for recording generating its customers. Design an application for the same using the following database table.

Table 1 - MstTariff

Field Name	Data Type	Remark
Tariff_Id	Int	PK (AutoNumber)
TariffPlan	Varchar	Tariff1/Tariff2/Tariff3
Rent	Int	Not Null
CallRate	Double	Not Null

Table 2 – MstCustomer

Field Name	Data Type	Remark
CustomerId	Int	PK (AutoNumber)
CustomerName	Varchar	Not Null
IsStudent	Int	Y/N

Table 3 – TblBillDetails

Field Name	Data Type	Remark
Bill_Id	Int	PK (AutoNumber)
TariffId	Int	ForeignKey
CustomerId	Int	ForeignKey
Month	Int	NotNull
No_of_Calls	Int	NotNull
Amount	Double	$Rent + (CallRate * No\ of\ Calls)$
Discount	Double	AutoCalculation
BillAmount	Double	AutoCalculation

- Make 3 manual entries in the master table MstTariff and MstCustomer.
- Design GUI to save data with proper checks and validation in the table TblBillDetails following criteria.
 - CustomerName,TariffPlan should be visible on GUI in dropdown
 - Duplicate entry for the same customer for a single month is not allowed.
 - 20% discount on amount is given to Students.

- **Report**

- Select Month XXXXXXXXXX

#	CustomerName	TariffPlan	Amount	Discount
---	--------------	------------	--------	----------

- Total amount collected in a month

Month	TotalAmount
-------	-------------

Note: Grouping should be made as per requirement.

Post: Programmer

ABC Company records data relating to insurance agents and customers. Following are the type of schemes available and commission percentage, schemewise, for agent:

	Name of Scheme	Commission to Agent
1	A	2%
2	B	2.7%
3	C	3.3%

Table 1 - Agent_Master

Field Name	Data Type	Remark
Agent_No	Int	PK (AutoNumber)
Agent_Name	Varchar	

Table 2 - Scheme_Master

Field Name	Data Type	Remark
Scheme_No	Int	PK (AutoNumber)
Scheme_Name	Varchar	
Commission	Decimal	As per detail mentioned above

Table 3 – Policy_Details

Field Name	Data Type	Remark
Policy_No	Int	PK(AutoNumber)
Date	Date	
Scheme_No	Int	FK
Agent_No	Int	FK
CustomerName	Varchar	
PolicyAmount	Int	
Commission	Decimal	To be calculated Automatically from SchemeMaster

2. Make at least 5 manual entries in Master table Agent_Master and 3 entries in Scheme_Master.

3. Create a GUI to save data in Policy_Details table as per the conditions mentioned above. Use dropdownlist to display Scheme and Agent.

4. **Reports:-**

- The detail of Policies done by agents.

Agent	Scheme	No.Of Policies
-------	--------	----------------

- The detail of Commission earned by agents.

Agent	Commission
-------	------------

Note: Incorporate proper Checks & Validations.

Post: Programmer

1. An Automobile showroom records data relating to commission to be paid to Salesman. Create an application to save data relating to the Salesmen and Customers using following tables:-

Table 1 - Salesman_Master

Field Name	Data Type	Remark
SalesmanCode	Int	Primary Key (AutoNumber)
SalesmanName	Varchar	

Table 2- Vehicle_Master

Field Name	Data Type	Remark
VehicleCode	Int	Primary Key (AutoNumber)
VehicleName	Varchar	
VehicleType	Varchar	Two Wheeler /Four Wheeler
Price	Integer	
Commission	Decimal	Not Null & Non Zero (in %)

Table 3 - Bill_Details

Field Name	Data Type	Remark
BillNo	Int	Primary Key (AutoNumber)
BillDate	Date	
VehicleCode	Int	Foreign Key
SalesmanCode	Int	Foreign Key
CustomerName	Varchar	
Accessories	Char	Y/N
Amount	Decimal	(Price+Accessories Charges)
FestivalDiscount	Decimal	Null
GST	Decimal	Automatically@ 28%
Commission	Decimal	To be calculated automatically from VehicleMaster depending on vehicle type (including accessories charges, if any)

2. Make at least 5 manual entries in Master Salesman_Table and 3 manual entries in Vehicle_Master.

3. Design GUI to save data in Bill_Details tables as per the following conditions.

- a) Accessories Charges are 5% of vehicle price.
- b) Festival Discount @7% be given if month of purchase is November.
- c) Use Dropdownlist wherever required.

4. Reports:-

- Sales details of Vehicle done by Salesman between two dates:
 SelectDate1: XXXXXXXX SelectDate2: XXXXXXXX

Sr.No	Salesman	VehicleName	No.Of Vehicle	TotalAmount (Including Tax)	Commission
-------	----------	-------------	---------------	-----------------------------	------------

- Display Total no. of four wheelers sold by Salesman between two dates:
 SelectDate1: XXXXXXXX SelectDate2: XXXXXXXX

Sr.No	SalesmanName	No. of Vehilce Sold
-------	--------------	---------------------

Post: JSD/Programmer

Design the following database.

Table 1 - Account_Dtls

Field Name	Data Type	Remark
AccountNo	Int	Primary Key
NameAccHolder	Varchar	

Table 2- Fixed_Deposit_Dtls

Field Name	Data Type	Remark
FD_No	Int	AutoGenerate
AccountNo	Int	Foreign Key
Duration	Int	
InterestRate	Decimal	
DepositAmount	Decimal	
MaturityAmount	Decimal	
FDIssueDate	Date	
MaturityDate	Date	

Criteria for Interest Rate

1-2 year	6%
2-4 year	7%
>=5 year	8%

Instructions:

- Design a GUI for saving records into the Fixed_Deposit_Dtls table.
- Make manual entry for at least five records into the 'Account_dtls' table.
- The Interest should be automatically come in the interest rate fields according to the duration criteria.
- Use appropriate Validations where ever applicable.
- Maturity should be automatically calculated according the duration and FDIssueDate.

Design the following two reports using either data grid or any other reporting tool.

- Display following report for selected AccountNo in the following format.

AccountNo	Name	FDNo	Duration	Deposit Amount	Maturity Amount	Issue Date	Maturity Date
-----------	------	------	----------	----------------	-----------------	------------	---------------

- Display a Report for all the Account Holder having a Fixed Deposit.

Name of Account Holder	No. of Fixed Deposit
------------------------	----------------------

Post: Programmer**Table 1 : Blood Bank**

S#	Field Name	Data Type	Remarks
1.	Blood Bank Code	Integer	Primary Key
2.	Blood Bank Name	Varchar	Not Null
3.	Blood Group Code	Integer	Foreign Key
4.	Price Per Unit	Integer	Not Null
5.	Quantity Available	Integer	Not Null

Table 2 : Blood Record

S#	Field Name	Data Type	Remarks
1.	Transaction ID	Integer	Primary Key (AutoNumber)
2.	Blood Bank Code	Integer	Foreign Key
3.	Blood Group Code	Integer	Foreign Key
4.	Customer Type	Varchar	(Employee/ Individual)
5.	Date of Transaction	Date	Not Null
6.	Quantity	Integer	Not Null
7.	Cost	Float/Decimal	Auto Calculated
8.	Discount	Float/Decimal	Auto Calculated
9.	Amount Payable	Float/Decimal	Auto Calculated

Table 3 : Blood Group

S#	Field Name	Data Type	Remarks
1.	Blood Group Code	Integer	Primary Key
2.	Blood Group Name	Varchar	Not Null

1. Design the following Reports –

- a) Total Discount provided to each type of customer between two dates -

Select From: XXXXX

Select To: XXXXXX

- b) Show the Details of Total Blood sold for each Blood Group type as per the format below (in Descending Order)

Table 1: Blood Group

S#	Date	Customer Type	Discount
----	------	---------------	----------

S#	Blood Bank	Blood Group	Customer Type	Quantity Sold
----	------------	-------------	---------------	---------------

2. Make atleast 3 Manual Entries in MstBloodGroup Master Table and corresponding entries for each blood group for atleast 2 banks in MstBloodBank.

- a) Total Quantity Sold to a Customer in a Blood Bank must not exceed the Quantity Available for a particular Blood Group.
- b) Any transaction should not temper the data in Master Tables.
- c) Give Discount in Cost according to the following condition.

Customer Type	Discount
Employee	20%
Individual	10%

Post: Sr.Programmer/Programmer

1. ABC Company records data relating to insurance agents and customers. Following are the type of schemes available and commission percentage, scheme wise, for agent:

- Create an application to save data relating to the agents and customers using the following database tables:-

Table 1 - Product_Master

Field Name	Data Type	Remark
Product_Id	Integer	Primary Key (AutoNumber)
Product_Name	Varchar	
Price	Decimal	

Table 2- Shop_Master

Field Name	Data Type	Remark
Shop_Id	Integer	Primary Key (AutoNumber)
Shop_Name	Varchar	
Product_Id	Int	ForeignKey
Stock_Available	Integer	

Table 3 - Transaction_Details

Field Name	Data Type	Remark
Transaction_Id	Integer	Primary Key (AutoNumber)
Product_Id	Integer	ForeignKey
Shop_Id	Integer	ForeignKey
Customer_Name	Varchar	
Quantity	Integer	
Date	Date	
Discount	Decimal	AutoCalculated
Total_PayableAmount	Decimal	AutoCalculated

2. Make at least 3 manual entries in Master table Product_Master and 2 manual entries in Shop_Master corresponding to each product.

3. Create a GUI to save data in the Transaction_Details table as per the conditions mentioned above.

d) If Total Amount > 500 then discount 2%.

e) Total stock available does not exceed the quantity.

4. Reports:-

- The Detail:

SelectDate1: XXXXXXXX

SelectDate2: XXXXXXXX

#	Shop Name	Product Name	Total Discount	Total Payable Amount
---	-----------	--------------	----------------	----------------------

- The Detail:

SelectDate1: XXXXXXXX

SelectDate2: XXXXXXXX

#	Shop Name	Product Name	Stock Sold	Stock Remained
---	-----------	--------------	------------	----------------

Note: Incorporate proper Checks & Validations.
